

2018-4-10 Roads, Water and Sewer Report

Recent activity near the water tanks associated with cell tower traffic has caused damage to FPOA facilities located in the wet road. This is hazardous, due to the high pressure water lines located there. To prevent injury and damage to our water system, it may be necessary to limit access to the area. Signs and a chain will be installed to notify users of this condition.

Road maintenance will resume as time and weather permits.
